

BOISE WHITEWATER PARK

PHASE 2 MODIFICATIONS

Since installation in 2019, the Phase 2 adjustable wave feature has neglected to provide the user experience originally intended. This winter, modifications will be made to the installed wave structures. These modifications will enable staff to produce a more reliable and predictable in-river wave feature at various water levels.

PROJECT TIMELINE

**December
2023**

Permitting is complete; materials have been acquired

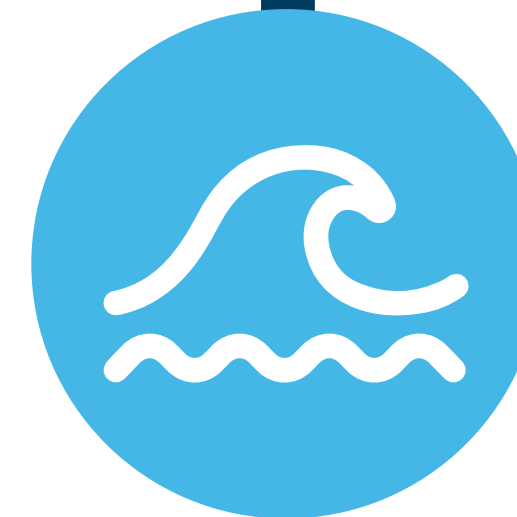

**January -
February 2024**

In-river construction is underway

March 2024

Completion of modifications to Phase 2

Summer 2024

Staff and recreationists are learning and enjoying the modified wave feature

**During the in-river construction phase, water will be re-routed through pipes around the construction area.*
